Andre Thomas

Vuejs | JavaScript | .NET | C# Software Engineer
Greater Augusta Area

Summary

I am a Full Stack Engineer with over 6 years of experience in working for small startups to large enterprise companies. I have worked on relational databases, APIs, frontend and backend technologies, created unit tests and Integration tests for code I built. I am hoping to work for a company that offers what motivates me the most: opportunities to learn new technologies and challenging problems to solve.

Experience

Booz Allen Hamilton
Software Engineer II
October 2024 - Present (1 year 1 month)
South Carolina, United States

- Uses Vue.js and .NET Framework to build out a new screen during system migration.
- Uses .NET 8 to create a new API aforementioned screen in keeping with microservices architecture.
- Uses Entity Framework Core to perform operations on the data in a SQL Server database.
- Migrating old APIs to use newer .NET 8 and Entity Framework Core features.
- Migrating React, Express.js, Node, Mongo (MERN), and .NET app from GitLab hosting to Azure App Services.
- Building features and squashing bugs in Vuejs 2 and .NET Framework 4.7.2 system.
- Managing tickets and deployments in Azure DevOps.

Best Lawyers
Software Engineer II
June 2023 - August 2024 (1 year 3 months)
Augusta, Georgia, United States

- Using Vue.js, Bootstrap, and .NET MVC, .NET 6, .NET 7, .NET Framework, and Entity Framework Core to build and maintain pages in our application ecosystem.

- Used Telerik Kendo UI components to update and create web pages.
- Using T-SQL to create stored procedures for new and existing projects.
- Using Azure DevOps to deploy changes to dev and production.
- Used ElasticSearch to query data and add new data to already built data pulls.
- Navigated Azure Portal for needed information.
- Streamlined publications management process, reducing it from three screens to a single interface.
- Migrated business application features from legacy systems to our new web application.

Plex Systems, Inc.
Software Engineer I
May 2021 - June 2023 (2 years 2 months)
South Carolina, United States

- Used .NET MVC, .NET Core, and .NET Framework to build and maintain our ERP web applications and REST APIs.
- Used T-SQL to create stored procedures for new and existing projects and wrote TSQT to test them.
- Using Azure DevOps to create pull requests and perform code reviews.
- Used Jira to manage tickets and Confluence to read and contribute to business knowledge.
- Used xUnit to build unit tests.
- Created a tracking number feature for user shipments.
- Revamped an internal template for testing records, which streamlined code reviews and QA processes.
- Developed solutions tailored to customer success projects to present to stakeholders.
- Worked on a team project to build a feature to help users track inventory.

iDrive Fulfillment
Software Engineer I
August 2019 - May 2021 (1 year 10 months)
Nicholasville, Kentucky

- Using AngularJS and .NET Core and .NET Framework to build and maintain pages in our application ecosystem.
- Used T-SQL to create and maintain stored procedures.
- Re-engineered a notification system so users can subscribe themselves.
- Built a feature that allowed the CTO to share release notes with the business.
- Integrated Swagger API to help clients easily integrate with our system.

- Maintained an external API for clients who needed to access our data.
- Integrated Order Bot to our system.
- Worked with CTO to build a program for employees to track their performance.

Fayette County Public Schools (KY)
3 years 8 months
